

pp. 40-41 Multiplying Polynomials

Warm Up:

p. 40

1) Find the total area of the following rectangles:

$$27 \cdot 28 = 756$$

Find the total area of the following figure:

p. 41

How is the expression  $(x + 8)(x + 7)$  similar to the expression  $28 \times 27$ ?

Explain how the result  $x^2 + 15x + 56$  is related to 756 determined in the warm up?

**Use the box method (area method to multiply the following binomials)**

1)  $(2x + 1)(5x + 6)$

	$5x$	$6$
$2x$	$10x^2$	$12x$
$1$	$5x$	$6$

$10x^2 + 17x + 6$

2)  $(x + 6)(3x - 2)$

	$3x$	$-2$
$x$	$3x^2$	$-2x$
$6$	$18x$	$-12$

$3x^2 + 16x - 12$

What other methods can you use to multiply polynomials?

Multiply the following and combine like terms.

3)  $(2x - 3)(x + 10)$

$2x^2 + 20x - 3x - 30$

$2x^2 + 17x - 30$

4)  $(x - 1)(3x - 2)$

$3x^2 - 2x - 3x + 2$

$3x^2 - 5x + 2$

What method would you use to multiply more complicated polynomials?

Multiply the following and combine like terms.

5)  $(x^2 + 3x + 1)(x + 10)$

	$x^2$	$3x$	$1$
$x$	$x^3$	$3x^2$	$1x$
$10$	$10x^2$	$30x$	$10$

$$x^3 + 13x^2 + 31x + 10$$

Independent Practice

Worksheet - Odds

#23 bonus

**Exit Ticket**

**Multiply  $(x - 1)(4x^2 + 4x - 1)$  and combine like terms.**
